

MANIFESTO

Innovation is a beautiful thing. It is a force with both aesthetic and pragmatic appeal: It unleashes our creative spirit, opening our minds to hitherto undreamed-of possibilities, while simultaneously accelerating economic growth and providing advances in such crucial human endeavors as medicine, agriculture, and education.

Melissa A. Schilling¹

Innovation is a powerful engine for human betterment. It has been used for centuries by groups, organizations and companies to create new technologies.

Today, access to technology is limited by a small number of organizations who restrict access to innovation and create strong dependencies by offering solutions *as a service*. Antiopea seeks to democratize access to complex technologies like Blockchain and AI to help organizations reach their aspirations and enable society to thrive from the benefits of technological innovation.

At Antiopea, we believe organizations should:

- Have direct access to innovation
- Be in control of new technologies to accelerate growth
- Master the tools at their disposal

Antiopea offers both technical assistance and innovative software solutions to its Network members.

First, we provide a technical expertise to enable organizations to understand and exploit the innovation for their specific job and industry. With our services, the Antiopea members can understand the opportunities and risks created by new technologies such as Blockchain infrastructure and AI algorithms.

In addition, our members gain access to Axiom, a NRM software (Network Relationship Management) based on Antiopea R&D innovations that enables users within an organization or within a several organizations to manage their professional network interactions, secure their exchanges and certify their documents.

With our services and solutions, Antiopea Network members can now understand and trust innovation and become truly autonomous in their data management endeavors.
